

FINTECH

FinGuard

PEC HACKS 4.0

Detect risk. Trigger response.

A pre-payment QR and UPI-link safety layer that turns high-risk signals into immediate action.

TEAM SINNERS

IIIT Sri City · PEC Hacks 4.0

**PEC
HACKS**

Fraud wins in the gap between suspicion and action

Victims often recognize something is wrong—then lose time deciding what to do next.

51% of surveyed UPI fraud victims did not
report the incident

₹22,495 Cr

lost to cyber fraud in 2025

24 lakh

complaints recorded in 2025

The product must make the safest next step obvious—and immediate.

THE RESPONSE LAYER

FinGuard closes the gap between detection and action

01

SCAN OR PASTE

Bring a QR code or UPI payment link into the app.

02

SCORE EXPLAINABLY

Combine first-time payee, VPA age, amount and onboarding signals.

03

RESPOND IN ONE TAP

Pause high-risk payments, draft the complaint and alert a trusted contact.

USER CONFIRMS BEFORE ANY REPORT OR ALERT IS SENT

Three dependencies; one hard boundary

Three dependencies support the prototype; deep in-app interception remains permission-gated.

APP INPUT

Scan + paste

Camera or clipboard access brings QR and UPI-link input into the app.

RISK SIGNALS

Score

VPA age, payee history, amount and seeded data drive scoring.

RESPONSE

Draft + alert

LLM drafting and notifications stay behind explicit user confirmation.

SHOWSTOPPER

Direct in-app payment interception requires Android Accessibility permission or banking-app integration—outside the 36-hour build.

The demo proves calibration—not just detection

Three scans show the product staying quiet, warning carefully, and acting decisively.

A practical stack turns signals into action

Flutter and FastAPI run the flow; OpenAI and Firebase prepare the response.

TEAM SINNERS

The safest next action can be one tap away

Built at IIIT Sri City to prove a practical, transparent response to payment fraud.

SCAN → SCORE → RESPOND

Practical scope. Explainable signals. Human confirmation.
